

Congratulations!

Your building's water metering system is handled by Verto. You will have a free access to Vesilasku.fi, which is a user portal, created especially for residents to monitor their personal water consumption. This is important in Verto homes, because just like with electricity, you only pay for what you use. By simply monitoring your own water consumption from the apartment display unit or from the Vesilasku.fi user portal, you can decrease your water consumption up to 30%.

Moderate use of hot water also affects the entire building's energy usage, as heating the water takes up about 30% of the building's heating energy. By conserving water, our nature and your wallet will thank you for it!

Verto handles the maintenance and billing of your water consumption data. You can contact us whenever you have any questions regarding your water consumption or billing. The service is proudly provided to you by us at VertoNordic Oy.

You can also find more information about water consumption on our website [verso.fi](https://www.verso.fi)
